

# The Home Page

## Affordance & Signifiers

In the menu design, clear affordances are established through button shapes and interactive icons, while signifiers such as hover states, arrows, and label text communicate the available actions. This ensures users instantly understand how to navigate, aligning with people-centered design principles of clarity and intuitive interaction.

## Resources page & the Event page

### Gestalt principles

- Proximity is implemented by grouping each section in the resource and events location.
- Similarity is being used by reutilizing the design for each unit of information carts that represents the same thing.
- Continuity is presented in the Topics listed in the resource and event page, as they are in a straight line, making each item feel related.

- **Constraints** are applied through simplified navigation, structured grid layouts, and limited input options, ensuring a focused and error-free experience
